Enriched Metabolic Modules
Citrate cycle (TCA cycle)
Riboflavin metabolism
Alanine, aspartate and glutamate metabolism
Tyrosine metabolism
Glucagon signaling pathway
Valine, leucine and isoleucine degradation
Ubiquinone and other terpenoid−quinone biosynthesis
Glyoxylate and dicarboxylate metabolism
Taste transduction
Central carbon metabolism in cancer
Pentose and glucuronate interconversions
Phenylalanine, tyrosine and tryptophan biosynthesis
Lysine degradation
D−Amino acid metabolism
Phenylalanine metabolism
